MY PROFESSIONAL JOURNEY

Personal Purpose Statements

Micro Version

Embody wisdom. Present love. Act without answers.

Short Version

I strive to embody wisdom—through how I live, love, and respond to the unknown. I move with awareness, act in alignment with my values, and let love lead my choices. **I focus on moving the world through my actions.**

Long Version

I strive to embody wisdom through how I live, move, love, and respond to the unknown.
I devote myself to living with depth, presence, awareness, and love— for myself, and for those I share this experience with.
One of my deepest commitments is learning how to live in peace with reality—whatever it may be. Another is sharing love in whatever forms I can—through care, creativity, connection, and quiet witnessing.
I live this way because I recognize: for every "truth" I consider, there may be another that contradicts it.
So rather than chase certainty, I follow the flow of what feels aligned and conscious in each moment.
I live guided by clarity, awareness, and a reverence for existence— without chasing answers that soothe my need for control, and without letting the ego distort my path into something self-centered.
Even if I never understand this life fully, I will live in a way I'd be proud of.

Fire Version

I don't need to be destined for something grand - but I live in a way that could rise to meet such a demand, if called.
I strive to embody wisdom - through how I live, love, and respond to the unknown.
Not because I expect answers, but because *how I respond is who I become.*
I imagine a future where automation frees people from survival, and what's left is the invitation to confront existence itself.
If that ever happens, I want to be one of the few already prepared.
I live like a prototype human - grounded, resilient, emotionally intelligent, spiritually strategic— someone capable of holding the weight of big questions, big love, big shifts.

I organize not for control, but for signal clarity. I train not for vanity, but to strengthen this vessel for awareness. I lead not for power - **but because I refuse to let this species suffer in vain.**
I act with discipline and devotion - without needing to believe in a fixed purpose. But *if* there's a role to play, a shift to guide, a truth to uncover… I want to be ready to carry it.
I do not need to save humanity. **I just need to live as if preparing to do so is a worthy way to exist.**
That is my discipline. That is my function. That is my fire.

Tomás Batalha — A complete, end-to-end purpose timeline

(every scrap of biographical detail you've shared, stitched together into one continuous narrative; citations refer to CV/Linked-In extracts)

---

0 – 5 yrs | Crèche-king, then social reset

Tomás arrives in the world brimming with *porquês* and devours the picture books that cram every shelf at home. By kindergarten he's the adored "crèche king," forever performing jokes and small piano riffs for classmates. At age 5, however, his parents move him to Salesianos one year later than the intake. He walks into a room whose social map is already drawn; popularity drains away overnight. A first ego-shock lands: *status is fragile,* grades might be the safest shield.

---

6 – 8 yrs | Top of every list, armour forged

Throughout **1.º ciclo** he leads the class in reading fluency, mental maths and science trivia. Teachers quote him in staff meetings; peers copy homework. That recognition feels like compensation for the lost crèche spotlight—and it cements an identity: **excellence = safety.**

---

9 – 12 yrs | Window-seat cosmologist & first jabs

2.º ciclo piles on harder algebra and verb conjugations; marks slide from stellar to "good, sometimes average." Teasing about his "femininity" surfaces. Instead of playgrounds he gravitates to the window, tracing fractal branches and traffic-light rhythms with near-mystical awe. There he sketches his famous day-dream: hold **twelve careers at once**—engineer, architect, ski racer, astronaut, manager, musician, doctor, writer, philosopher, photographer, pilot and chef—convinced that mastering many levers will one day serve a larger mission.

---

13 – 15 yrs | Bullying crescendo, metaphysics & nocturnal notebooks

3.º ciclo is brutal. Ridicule becomes daily, especially as he secretly questions his sexuality. Walking corridors, he studies classmates like clockwork mechanics, wondering whether cruelty is scripted. Evenings vanish into notebooks on determinism, solipsism and whether numbers exist independently of minds. Grades wobble; ego stiffens into armour. He feels utterly alone but vows: *I'll solve these cosmic riddles even if it kills me.*

---

16 yrs | First classroom change & the "immortality blueprint"

Returning to Salesianos for **11.º ano**—his first new cohort since primary school—reboots social anxiety yet jolts fresh thinking. He declares a personal covenant: **humanity can engineer immortality, maybe even exit this reality into a "higher level" one.** If so, society itself must be rebuilt from scratch, starting small but dreaming universe-scale.

---

17 yrs | U.S. exchange — sexuality embraced, destiny super-charged

A year in an American high-school swaps Catholic corridors for rainbow clubs. He finally **accepts his sexuality** and feels what he labels a "God-given mission": make humanity live forever so science never runs out of time to answer every metaphysical question.

---

18 yrs | Academic resurrection & NOVA-SBE ticket

Back at Salesianos, he hauls Maths from **5/20 to 18/20** in the national exam—regaining top-student status—while drafting venture sketches on longevity and new societal models. NOVA-SBE accepts him.

---

18 – 22 yrs | NOVA-SBE — laboratory of social redesign

- **Nova Tech Club:** leads events & codes a job-platform for low-education workers, testing tech as an equaliser .
- **Nova Social Consulting:** maps 155 organisational pain points for an environmental NGO, learning diagnostic rigour .
- **Nova Thirst Project:** recruits 23 volunteers, raises €2 539 for clean-water wells .
- **Portfolio Management Club & Awareness Club:** sharpens data-storytelling and mass-engagement skills .
- **WiSample & Jump Pre-Acceleration:** turns abstract ideas into working MVPs .

Lock-down evenings produce the **Waterfall Approach**: accelerating automation will rip the wage-for-survival scaffold away, forcing civilisation toward a science-centric, longevity-focused order.

---

22 – 23 yrs | Closeted love & psychological collapse

A secret relationship oscillates between passion and panic, detonating derealisation episodes. Yet professional grind continues: he audits **€40 B** in insurance assets at **EY** and propels Amazon's B2B launch for **2 300+ Portuguese firms**, lifting territory output by 80 % . Journals fill with existential OCD loops.

Mid-2023 | Cambodia — altruism on fumes

He spends the summer tutoring under-privileged kids with **Dream Big Cambodia**, hoping to rekindle purpose. The work is meaningful, but burnout shadows every lesson.

Sep 2023 – Jan 2024 | Rotterdam — self-retooling boot-camp

Enrols in the MSc in Strategic Management (GPA 8/10) . Piles on **LiveVersity** micro-courses: Productivity & Time Management, Advanced Public Speaking, MS Excel . Launches "Students Meet Startups" (150 attendees) and dissects 20+ consulting cases for the Rotterdam Consulting Club —but existential fog remains.

May – Aug 2024 | Google internship — technical apex, spiritual vacuum

Builds three scalable dashboards saving **€1.41 M** annually and briefs 200 + C-level clients . The achievement feels hollow against cosmic dread.

Sep 2024 – Jan 2025 | Singapore & 10+-country trek — the great re-wire

Stationed in Singapore, he backpacks through **more than ten Asian nations**. The unguarded kindness of strangers—monks in Chiang Mai, hostel owners in Hanoi, surfers in Bali—steady his spiralling thoughts. Deep dives into theology and simulation theory still trigger OCD loops, ADHD still scatters focus, yet one conclusion crystallises: **happiness is rooted in love, and that love—felt even in absence—is undeniably real.**

With that, the messianic "immortality crusade" feels like ego masquerading as altruism. He discards it and adopts a new, humbler mission: **mainstream mental-health literacy, ego-detection and evidence-based enlightenment.** Societies of the future must normalise psychological safety.

Nov 2024 – Present | Pairwire — sceptical execution dojo

Co-founds **Pairwire**, an AI due-diligence platform (2 154 leads engaged, pilots running) . Pairwire is not designed to “save the world”; it is Tomás’s **personal laboratory** for three reasons:

1. **Structural-insight reps:** Building software that reveals hidden risks trains the muscles needed to expose survival-labour structures later.
2. **Evidence discipline:** KPI-tight funnels and investor memos keep him *strategically sceptical*, guarding against uncritical spirituality.
3. **Culture prototyping:** Weekly ego-check-ins, open dashboards and mental-health stipends let him test how compassion, transparency and high performance can co-habit.

Pairwire proves he can translate high-minded ideals into rigorous execution without losing empirical footing.

Very late 2025 | Determinism epilogue

Reading neuro-philosophy on a night train, he realises free will might be an illusion—yet deliberate, compassionate actions still push causal chains. Maximising that ripple is the final synthesis.

Current purpose (April 2025)

Enable humanity to leave survival labour behind and create evidence-based, mentally healthy societies—stretching both the intensity of happiness and the span of life—while ensuring ego-awareness and compassionate action anchor every layer of progress.
